**ABSTRACT OF THE DISCLOSURE**

In a liquid crystal display device, in each unit pixel which is formed as a region surrounded by scanning signal lines and ~~date~~data signal lines, ~~includes that is a~~ pixel electrode to which signals of the ~~date~~data signal line ~~is~~are electrically supplied through a thin film transistor, and a common electrode is provided, which ~~are~~is electrically connected with ~~the~~a common signal line, ~~and~~. The common signal electrode is arranged so as to be superposed on the common signal line by way of an insulation layer, ~~and the~~. The pixel electrode is electrically connected with a source electrode of the thin film transistor via a through hole which penetrates the insulation layer, and the common electrode is formed ~~such that the common electrode so as to~~ extend in the inside of the unit pixel, while covering the common signal line.
